

4-0-1 PRO-QUENCH LIQUID FERTILIZER

Jump Start Your New Seed

GARANTEED ANALYSIS

Total Nitrogen (N)	4.00%
Available Phosphate (P205)	0.00%
Soluble Potash (K2O)	1.00%

Derived from: Aqua Ammonia, Calcium Nitrate, Sugar, and Focus.

CONDITIONS OF SALE

Seller warrants that the product conforms to its chemical description and is reasonably fit for the purposes stated on the label when used in accordance with directions under normal conditions of use, but neither this warranty nor any other warranty of fitness for a particular purpose, expressed or implied, extends to the use of this product contrary to label instructions or under abnormal conditions, or under conditions not reasonably foreseeable to seller, and buyer assumes the risk of any such use. Seller shall not be responsible for incidental or consequential damages, if any, resulting from a breach of warranty.

GENERAL INFORMATION

This controlled release formulation contains Uflexx, Milorganite, Sulfate of Potash, and Sul-PO-Mag. This formulation will provide 8 weeks of high quality turf and controlled growth. It contains humic materials and micronutrients: 1Mg, 3.5S, .5Fe. This is a 100% controlled release nitrogen fertilizer.

DIRECTIONS FOR USE

ATTENTION: ALWAYS CHECK COMPATIBILITY WITH OTHER PRODUCTS PRIOR TO USE.

Pro-Quench is designed to work in the root zone of established plants. Pro-Quench will work quicker if there is sufficient soil moisture and if adequate water is used to carry it into the root zone. Pro-Quench works best when applied during the early morning or late evening hours

SOIL APPLICATION RATES

To speed up germination and stand development apply 11.75 oz/1,000 sq ft with 5-7 gal of water. Allow material to dry and then water thoroughly, keeping the seed bed moist until germination.

Hydro-Seeding:

For quick emergence, faster establishment, better water management, and increased root mass add 11.75 oz/1,000 sq ft to the slurry.

New Sod:

Apply before or after laying sod using 11.75 oz/1,000 sq ft of Pro-Quench in 5-7 gallons of water. If applied after laying sod, follow initial application by watering the area with 75 gal of water/1,000 sq ft. Then water as needed to prevent wilting.

Lawn Application and Mid-Summer Fertilization:

To reduce stress and maintain mid-summer color and density apply 11.75 oz/1,000 sq ft.

Transplant Water (all crops):

Use 4 gallons of Pro-Quench per acre in 500-1,000 gal water/acre.
