

Pro-Quench™ 4-0-1

GUARANTEED ANALYSIS

Total Nitrogen (N) 4.00%

Soluble Potash (K₂O) 1.00%

Derived from:

Aqua Ammonia and Calcium Nitrate

Other ingredients: Sugar alcohol

CONDITIONS OF SALE

Seller warrants that the product conforms to its chemical description and is reasonably fit for the purposes stated on the label when used in accordance with directions under normal conditions of use, but neither this warranty nor any other warranty of fitness for a particular purpose, expressed or implied, extends to the use of this product contrary to label instructions or under abnormal conditions, or under conditions not reasonably foreseeable to seller and buyer assumes the risk of any such use. Seller shall not be responsible for incidental or consequential damages, if any resulting from a breach of warranty.

GENERAL INFORMATION

This is a liquid fertilizer and water management product formulated to improve germination and plant establishment. Pro-Quench is designed to jump start new seeding, sod, or transplanted trees and shrubs. Pro-Quench is effective in enhancing germination, promoting root development and improving water management. It is also effective in maintaining healthy plants during periods of heat stress. Pro-Quench will reduce watering by up to 50% when applied according to directions. It is ideal for lawn care providers, hydro-seeders, landscapers and nursery growers.

MIXING INSTRUCTIONS

Determine the area to be treated with Pro-Quench then mix the appropriate amount with water.

Fill tank roughly 1/2 full of water and begin agitation.

Add appropriate amount of Pro-Quench to mix tank

Add other pesticides of and/or nutrients (be sure to check compatibility prior to mixing)

ATTENTION: ALWAYS CHECK COMPATIBILITY WITH OTHER PRODUCTS PRIOR TO USE.

DIRECTIONS FOR USE

Pro-Quench is designed to work in the root zone of established plants. Pro-Quench will work quicker if there is sufficient soil moisture and if adequate water is used to carry it into the root zone. Pro-Quench works best when applied during the early morning or late evening hours.

SOIL APPLICATION RATES

Seed Bed Application:

To speed up germination and stand development apply 11.75 oz./1000 sq. ft. with 5-7 gal. of water. Allow material to dry and then water thoroughly, keeping the seed bed moist until germination.

Hydro-seeding:

For quick emergence, faster establishment, better water management and increased root mass add 11.75 oz./1000 sq. ft. to the slurry.

New Sod:

Apply before or after laying sod using 11.75 oz./1000 sq. ft. of Pro-Quench in 5-7 gal. of water. If applied after laying sod, follow initial application by watering the area with 75 gal./1000 sq. ft. water as needed to prevent wilting.

Lawn Application and Mid-Summer Fertilization:

To reduce stress and maintain mid-summer color and density apply 11.75 oz./1000 sq. ft.

Transplant Water (All Crops):

Use 4 gal. of Pro-Quench per acre in 500-1000 gal. water/acre.
