

Buck Builder is an Annual Deer Attractant

Buck Builder is a selection of highly palatable deer food designed to increase weight, increase antler size, and provide a good source of food well into the winter.

Formula

50% Ryegrain
30% Bestfor Tetraplid Perennial Ryegrass
15% Rape Seed
5% Purple Top Turnips

Ryegrain

Ryegrain has a feeding value of about 85 to 90% that of corn, and contains more digestible protein and total digestible nutrients than oat.

Bestfor Tetraplid Perennial Ryegrass

Bestfor is a long-lived cross of perennial and Italian ryegrass. It produces an immense amount of forage consisting of broad, dark green blades, and large succulent stems. Compared to tall Fescue, Bromegrass, and Timothy it is by far more palatable and digestible. It's quick germination and rapid establishment makes it an excellent choice.

Rape Seed

Rape Seed produces a high quality forage similar to alfalfa when eaten in the vegetative stage. It is high in protein and minerals and adds diversity to other food sources.

Purple Top Turnips

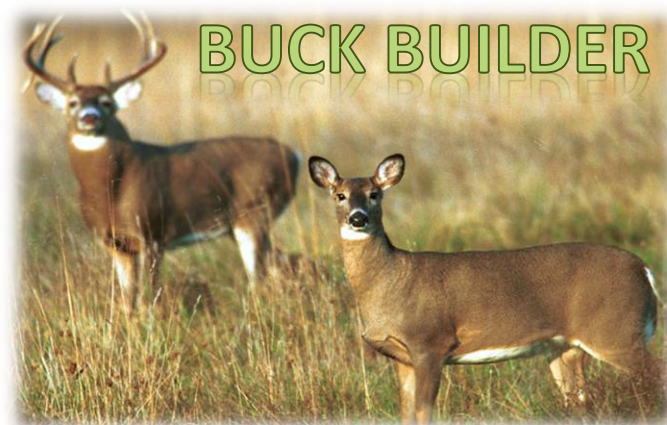

Turnips provide a well rounded food source to the deer. The greens are known to provide an excellent source of calcium, amino acids, vitamins, and key minerals. The bulbs are an excellent source of energy, calcium, and vitamins.

Planting & Seeding

This mixture is best planted around the 10th of August for best results. Recommended seeding rate is 30lbs per acre in a well-prepared seed bed.

Fertilization

Recommendation: apply 300lbs high calcium lime and 200lbs 7-8-7 GreenGuard Vegetable & Flower per acre before seeding. This will attract more deer, improve forage quality, and increase nutrient value.
