

# ECO THAW™

## PRODUCT

Professional strength de-icer treated with organic melting accelerator that works down to -25° F. Premium grade de-icing salt pellet ECO THAW™ is a premium grade, low-corrosion, de-icing salt developed for entries, sidewalks, parking lots and critical areas where fast ice control is needed.

## DESCRIPTION

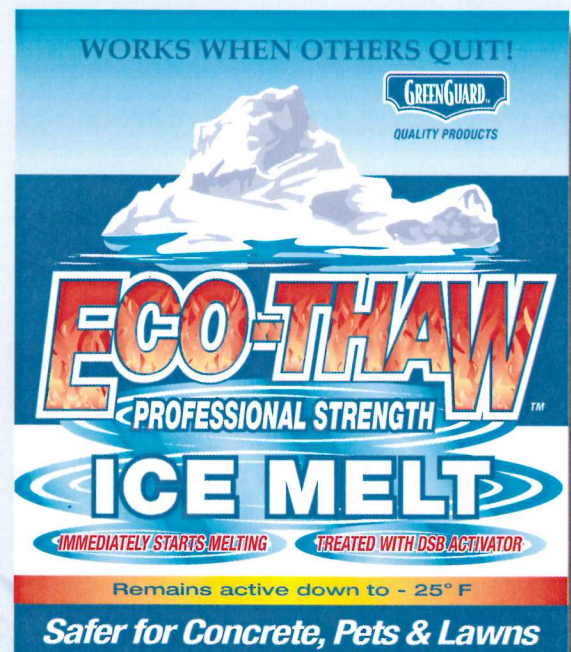

ECO THAW™ is a combination of a naturally derived accelerator, a proprietary corrosion additive, and rock salt. Together they accelerate melting down to -25°F, reducing corrosion and turf damage. ECO THAW™ is designed to meet the needs of maintenance professionals who must provide a safe environment under many different conditions. ECO THAW™ meets these requirements by providing predictable results under many conditions. ECO THAW™ is a granular product that significantly improves de-icing, melts faster, is less corrosive and reduces overall environmental damage from winter maintenance when compared to conventional ice melt formulations. ECO THAW™ may be used to pre-treat a surface or to de-ice. ECO THAW™ works effectively at lower temperatures and requires less material to maintain a safe environment than any blended product on the market today.

## FEATURES

- Effectively melts to -25° F
- Longer-lasting on surface
- Uniform spreading and rapid melting (even at night)
- Safe for turf and green space
- Reduces application rates by 25%
- Up to 80% less corrosive than regular rock salt
- Up to 80% less corrosive than regular rock salt
- Residue acts as an anti-bonding agent which makes snow shoveling easy and fast

## BENEFITS

- Starts thawing immediately – no sunshine needed!
- Eats through hard pack
- Breaks the bond between the sidewalk and ice or snow
- Easy removal
- Reduces call backs
