

GRASSMASTER

All-Purpose Hay or Pasture Mixture

Designed to be planted alone or as a grass portion for a mixed hay planting. Produces season-long forage over a wide range of soil conditions. Ideal for horses, cattle, or other livestock.

Seed Mix

20% Meadow Bromegrass 20% Bestfor Tetraploid Perennial Ryegrass

20% Climax Timothy 10% Orchardgrass 20% Sweet Tart Festulolium 10% Annual Ryegrass

Meadow Brome

Bromegrass is a deep-rooted perennial that adapts to a wide range of soil types. Bromegrass provides high quality pasture in late June and July when early varieties lose their vigor.

Climax Timothy

Climax Timothy is later starting, but yields best in the spring as well as later in the season. It is a long lived perennial that takes haying and pasturing well. Timothy provides exceptional forage for all animals. Its greatest yields are in the spring, early summer, and again in the early fall.

Sweet Tart Festulolium

A very palatable grass that is high in energy and nutritional value. Fesulolium is a cross between meadow fescue and perennial ryegrass. This cross captures the high palatability of forage quality identified with perennial ryegrass yet improves winter-hardiness and consistent summer growth of the meadow fescue. Sweet Tart Festulolium will be the first grass eaten in the pasture and will provide improved digestion, protein, and minerals.

Bestfor Perennial Ryegrass

Bestfor Perennial Ryegrass is a Tetraploid ryegrass known for its high forage quality and palatability. It is easy to establish and develops quickly. It is also an excellent source of amino acids, and key vitamins and minerals.

Orchardgrass

Orchardgrass is an easy to establish, excellent choice for hay or pasture. It is a high yielding grass that is excellent for early and late season hay or pasture production.

Annual Ryegrass

Annual Ryegrass produces a very palatable high quality hay or pasture grass. It makes a good addition to the blend because it establishes quickly and easily. Annual Ryegrass will generally produce hay in 6 weeks from the time of planting, depending on weather conditions.

Recommended Seeding Rate

25 lbs per acre for the best results. Adding GrassMaster to straight Alfalfa or Clover: 5-10 lbs per 50 lbs. of legume.

Bag Size: 25 lbs
