Millennium^{ULTRA}2™

Post-Emergent Selective Broadleaf Herbicide

Active Ingredients:

Amine salts of 2,4-D, Clopyralid and Dicamba

PROFILE

Millennium Ultra 2 is a premium post-emergent selective herbicide specially formulated to provide superior control of a wide range of broadleaf weeds, including spurge, oxalis and clover.

ADVANTAGE

Millennium Ultra 2's composition of 2,4-D, Clopyralid and Dicamba provides one of the most effective liquid formulations for broad-spectrum weed control available in the market today.

MILLENNIUM ULTRA 2 FEATURES AND BENEFITS

- Three powerful weed-killing amines in one formulation
- Excellent control of even the hardest-to-kill weeds
- Innovative chemistry – rapid response, maximum performance
- Complete, rapid control of clover with one application
- For use throughout the growing season
- Tank mix compatible with most liquid fertilizers or iron*
- Specifically formulated for commercial turf use

MILLENNIUM ULTRA 2 PRIMARY USE

- Golf Courses
- Tees
- Fairways
- Aprons
- Roughs
- Turf (Not Pasture or Sod)
- Parks
- Cemeteries
- Non-Crop Areas
- NOT FOR RESIDENTIAL TURF USE

MODE OF ACTION

The active ingredients for Millennium Ultra, the amine salts of 2,4-D, Clopyralid and Dicamba, are all powerful and effective herbicides. 2,4-D prevents sugar movement from the leaves to the root of the plant. Clopyralid translocates throughout the plant and disrupts normal development. Dicamba, a benzoic acid, affects areas of high metabolic activity causing epinasty, defoliation and, ultimately, elimination of the weed.
