TURF & AG

## Quick N' Sure

### All-Purpose Seed Formula

Quick N' Sure is the all-purpose seed formula designed to establish quickly. Quick N' Sure is intended for use on residential, public, and commercial lawns that receive irregular management, or where high quality turf is not required. Quick N' Sure is best suited to large open areas with low traffic and usage.

### Seed Mix

30% Turf Type Kentucky Bluegrass

25% Turf Type Perennial Ryegrass

30% Turf Type Creeping Red Fescue

15% Turf Type Annual Ryegrass

### Characteristics

Fast establishment

Good seedling vigor

Fair density

Good green color

Medium wear tolerance

Medium shade tolerance

Medium texture

Winter hardy

Early spring green-up

### General Turf Care

Quick N' Sure will perform well under a wide range of maintenance programs. However, it is probably best suited for a low maintenance program.

### Maintenance Tips

The unique varieties in Quick N' Sure have a more upright growth habit and are best suited to low maintenance. In order to decrease the chances of disease, weed and insect infestation, do not mow less than 3 inches. Do not fertilize more than 3 times the high use rate, or water excessively. The best maintenance program is GreenGuard Lawn Maintenance Mix or 13-0-5 Crabgrass Control in the spring, Pro-Quench in early June, and our GreenGuard Winterizer in the fall. Apply GreenGuard Lawn Maintenance Mix at the repair rate shortly after the frost is out of the ground to reduce excessive stress in the spring.

### Mowing

Optimal mowing height is at 3 inches. This height will produce healthier plant with less weed pressure, disease problems, and insects. Height of cut will significantly affect the longevity of this blend. Quick N' Sure will be more persistent if you leave the clippings and never remove more than 30% of the height at any one mowing time (especially in the summer months). The most successful fall program is to reduce mowing height to 2 inches in mid-October, to better prevent spring disease infestation.

### Seeding Rates

Before planting use our GreenGuard Soil Prep Plus to promote root development and faster establishment.

New Lawn: 200-250 lbs. per acre

Repairing: 2-4 lbs. per 1,000 sq. ft. based on severity of damage.
